Automation Workflow for:

Get-DeletedTeamsSites.ps1

Initialize & Run the Script:

Initialize Script

Requirements:
Required Modules:
- Microsoft.Graph.Authentication

PowerShell Version:
- PowerShell 5.1 and PowerShell 7+

Application Registration:
- Directory.Read.All
- Group.Read.All
- AuditLog.Read.All
- mail.send

Start → Initialize Script

Required Modules:

```
#requires -Modules Microsoft.Graph.Authentication
Import-Module Microsoft.Graph.Authentication -ErrorAction Stop
```

Required Application Registration:

```
{
  "AppRegName": "M365-PowerShell-Automation",
  "TenantId": "<tenant-id>",
  "ClientId": "<clinet-id>",
  "CertificateThumbprint": "",
  "ClientSecretID": "",
  "ClientSecretValue": ""
}
```

Script Logic:

Connect MS-Graph API

Connect-MSGraph

Required MS-Graph API Permissions:

```
$requiredScopes = @("Directory.Read.All", "Group.Read.All", "AuditLog.Read.All", "Mail.Send")
onnect-MgGraph -Scopes $requiredScopes -NoWelcome -ErrorAction Stop
```

Get Teams Data

Identifies Teams-enabled groups vs standard M365 Groups.

Get-DeletedTeamsGroups

MS-Graph Rest API Call:

```
### Build the Graph API URI for deleted groups
$uri = "https://graph.microsoft.com/v1.0/directory/deletedItems/microsoft.graph.group"
$response = Invoke-MgGraphRequest -Method GET -Uri $uri -ErrorAction Stop
```

Get-AuditData
(for "DeletedBy" & "DeletedDate")

Get Audit Log for Deleted By & Deleted Date:

```
### Search for group deletion events
$auditRecords = Search-UnifiedAuditLog -StartDate $startDate -EndDate $endDate `
                -Operations "Delete group" -ResultSize 5000 -ErrorAction Stop
```

Correlate Deleted Groups with Audit Logs

foreach ($team in $deletedTeams)

Loop through All Deleted Teams Sites

```
foreach ($team in $deletedTeams) {
        if ($IncludeSiteInfo -and $team.id) {
                ($IncludeAuditData -and $auditCache.ContainsKey($team.id)) {
                        $auditData = $auditCache[$team.id]
                }
        }
}
```

$results += $teamInfo

```
$teamInfo = [PSCustomObject]@{
                DisplayName                    = $team.displayName
                GroupId                        = $team.id
                Mail                           = $team.mail
                MailNickname                   = $team.mailNickname
                DeletedDateTime                = $team.deletedDateTime
                Description                    = $team.description
                Visibility                     = $team.visibility
                CreatedDateTime                = $team.createdDateTime
                RenewedDateTime                = $team.renewedDateTime
                ExpirationDateTime             = $team.expirationDateTime
                GroupTypes                     = ($team.groupTypes -join ', ')
                MembershipRule                 = $team.membershipRule
                MembershipRuleProcessingState  = $team.membershipRuleProcessingState
                PreferredDataLocation          = $team.preferredDataLocation
                PreferredLanguage              = $team.preferredLanguage
                ProxyAddresses                 = ($team.proxyAddresses -join '; ')
                SecurityEnabled                = $team.securityEnabled ?? $false #default
                MailEnabled                    = $team.mailEnabled ?? $false #default
                IsAssignableToRole             = $team.isAssignableToRole ?? $false #default
                Theme                          = $team.theme
                OnPremisesSyncEnabled          = $team.onPremisesSyncEnabled
                OnPremisesLastSyncDateTime     = $team.onPremisesLastSyncDateTime
                OnPremisesSecurityIdentifier   = $team.onPremisesSecurityIdentifier
                Classification                 = $team.classification
        }
```

Export Reports:

Export CSVData

Build Reports

Export-HTMLReport

Deleted Teams Data

HTML Email Report

Send Email Reports

Send-Email

Send Email with Graph API

```
### Send email via Graph API
Write-Log "Sending email report to: $($EmailTo -join ', ')" -Level Info
$uri = "https://graph.microsoft.com/v1.0/users/$EmailFrom/sendMail
Invoke-MgGraphRequest -Method POST -Uri $uri -Body $emailBody -ContentType "application/json"
```

Exit Codes & Disconnect
(Good for Automation)

Disconnect-MSGraph

Disconnect MS-Grap API

```
### Support for Automaton and Azure Functions, etc.
Disconnect-MgGraph
```

Return Exit Codes

Return Exit Codes

```
### Script returns exit codes for automation scenarios
exitcode {0=success, 1=failure}
```

End

```
